• Backup and Restore of the configuration via USB Stick.
• Touch-Screen with Active 8,4" TFT VGA color display
• Remote Software for Windows, Mac, Linux, iPhone, PocketPC, ...

... simply save

Only energy that you don't use is cheap - it doesn't cost anything! With myGEKKO you can control the energy consumption of every room individually and in addition **actively take the energy management for your house into your own hands.** The first step toward a 'climate house'.

You can **plan usage** according to your own personal needs and occupation times, and **monitor or rather control it in situ** with myGEKKO. Alternatively you can also **operate myGEKKO via your mobile phone.** These possibilities open up **hitherto unknown perspectives of cutting costs** in your household.

✓ *save energy*
✓ *optimize consumption*

... simply safe

- ✓ *simulate presence*
- ✓ *activate alarm*

For comfort and security - there is no place like home! However, you have surely asked yourself before: Are the **lights all off**? Are the **windows** shut and **doors locked**? Have I **turned the heating down**? With myGEKKO as your friend these questions and the coupled feeling of insecurity are things of the past.

According to scenarios that you compile yourself in just a few steps, myGEKKO takes care of all those things that you would otherwise have to tediously do yourself in order to really feel safe. Among other things, **lights are automatically switched off, windows are closed, shutters are lowered** and the **heating is turned down**. Your friend also takes the weather in to consideration and **rolls up the awning in strong wind, closes the roof window when it rains** and **activates the rain gutter heating during frost**.

Thanks to myGEKKO's **occupancy simulation**, you can leave the house for a longer period of time without

having to fear burglars. Moreover, **myGEKKO keeps you up to date about any activity in your house. In worst case scenario myGEKKO even alarms** your neighbours or the **fire brigade and police.**

... simply flexible

You may build a house once in a lifetime. However, technology keeps developing. An up-to-date system may be outdated in just a few years' time. **While developing myGEKKO, we thought of tomorrow today.**

myGEKKO is constantly adjusted to technological innovation and can be extended with little effort **almost limitlessly with new functions...** These functions can be integrated easily and quickly into new scenarios. Thus myGEKKO can comply with your future requirements and can be **your faithful friend for years to come.**

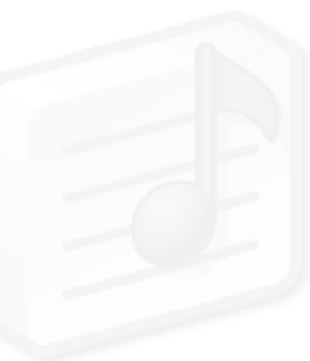

✓ remote control via mobile
✓ personalizable

... simply cool

Do you love music? Why not **wake up to your favourite song** or fill the whole house with the sounds from your **favourite internet radio station**? myGEKKO also gives oomph to your party when **playing your personal mp3-collection**.
